Marchenko, Alla A.(2019) present us a comprehensive concept about the sustainable development education in youth. His paper entitled *Sustainable Development Concept Implementation in Environmental Education* presented a thoroughly understanding of sustainability. The concept of sustainable development plays an important role among young students. Only when young students recognize sustainable behavior and consumption, sustainable development is possible in the future for human society. After more than 30 years of development, it had received many researched in d different countries. Dr. Alla’s papers give us a broad perspectives in Darwinism, natural philosophy and anthropocentrism. The primary role in this process is given to the education system, which must be appropriately reformed on the basis of sustainable development concept, reflecting the current trends in the development of human civilization in order to preserve its existence in harmony with the natural environment.

The solution of the problems connected with this is possible only on the basis of creating a new humanistic rational biosphere and noosphere-based world outlook and forming on its basis an individual and social consciousness, this target could be approached by education system for youth.

It is recommended for some readers and other scholar pay more attentions to have more youth students further actions in sustainable development.
